Elsevier: Elston: Requisites in Dermatology Series Review ...

The larvae of *Onchocerca volvulus*, a nematode that is most commonly found in tropical Africa, Yemen, Central America, and South America, are transmitted by flies of the genus *Simulium* that breed near fast-flowing rivers. The flies bite the host and transmit the larvae, and the larvae then mature into adults within the skin and subcutis, forming nodules that typically are not painful.

Dermoid Cyst. Dermoid cysts often present clinically as firm subcutaneous nodules on the head or neck in young children. They tend to arise along the lateral aspect of the eyebrow but also can occur on the nose, forehead, neck, chest, or scalp. 1 Dermoid cysts are thought to arise from the sequestration of ectodermal tissues along the embryonic fusion planes during development. 2 As such, they ...
