algorithm. It introduces the relevant graph theory concepts that are needed and the working principles behind the algorithms are explained briefly. Next an experiment is conducted in which the order of the starting graph is changed and each algorithm's runtime is then measured. As a result it is possible to draw an order versus time graph.

In mathematics, graph theory is the study of graphs, which are mathematical structures used to model pairwise relations between objects. A graph in this context is made up of vertices (also called nodes or points) which are connected by edges (also called links or lines). A distinction is made between undirected graphs, where edges link two vertices symmetrically, and directed graphs, where ...
