Gravity and Magnetic Exploration by Hinze, William J. (ebook)

Processing in magnetic exploration removes the extraneous variations directly from the observations, rather than modeling the field at the observation site as in gravity data processing. However, the result is the same. It is equivalent to the anomaly obtained by subtracting the theoretical field from the observations.

Magnetic data processing (Chapter 12) - Gravity and ...

The common unit of gravity measurement in exploration geophysics is milliGal ($1,000 \text{ mGal} = 1 \text{ Gal} = 1 \text{ cm/s}^2 = 0.01 \text{ m/s}^2$). These units refer to acceleration due to gravity, and the average value at the earth surface is around 980,000 mGal or 9.8 m/s^2 . By comparison, anomalies in mineral and oil exploration seldom exceed a few
