P0115 2000 TOYOTA ECHO Description. The Engine Coolant Temperature (ECT) sensor is used to detect the engine coolant temperature. The sensor modifies a voltage signal from the Engine Control Module (ECM). The modified signal returns to the ECM as the engine coolant temperature input. The sensor uses a thermistor which is sensitive to the change in temperature.

Engine Temperature Sensor: Where Is the Engine Temperature ...

Just curious if anyone has attempted powering an actual stand-alone temperature gauge from the ECT up at the top of the head. Since the vehicle already has a perfectly good coolant temp sensor, and its plug already talks to the computer telling it the temp of the coolant... just wondered if anyone had attempted to power an aftermarket temp gauge using that sensor.
